bhogesainivas@gmail.com | +91 8886176540 | Open to Relocation | Github | LinkedIn

SKILLS

Programming Language: Python, TypeScript, JavaScript, SQL

Databases: PostgreSQL, MongoDB

Web Technologies: WebRTC, Node.js, Express.js, React.js, TypeScript, Websocket, Tailwind CSS, FastAPI

Data Structures and Algorithms: Solved 100+ problems in python

Tools: Git, Github, Docker

AI Engineering: LangGraph, LangChain, Agents, RAG, Embeddings, Gemini API, Pinecone, Prompts

PROJECTS

Multi-User Video Chat

August 2025

React, WebRTC, Socket.IO, Node.js, javascript

- Engineered a **multi-peer WebRTC architecture** in React, handling SDP negotiation, ICE candidate exchange, and media track management for real-time video/audio communication.
- Built a **custom signaling layer with Socket.IO** to support room-based peer discovery, reconnection logic, dynamic stream renegotiation, and user state synchronization.
- Implemented **screen sharing, in-room chat, and a real-time users list** that dynamically displays participants' audio/video mute status, integrated with multi-stream rendering and adaptive UI layouts.

AI Agent for Automated Email & Calendar Scheduling using LangGraph

October 2025

LangGraph agents, Reactjs, FastAPI, Mongodb

- Automate email and calendar workflows with an AI agent while ensuring reliability, user control, and seamless integration.
- Architected an AI agent using LangGraph with integrated Gmail and Google Calendar APIs, deployed on FastAPI with MongoDB backend and React frontend. Implemented intelligent tools for email drafting, meeting scheduling, and response management with feedback loops for continuous learning. Built an data pipeline streaming email data from Gmail API to agent and frontend.
- Delivered a production-grade system that accurately triaged and responded to emails while autonomously scheduling meetings, significantly reducing manual workload. Data pipeline reduced end-to-end latency from 10-13 seconds to 3-5 seconds, improving user experience while preserving oversight through memory updates and adaptive feedback.

RAG-Based Document Summarizer with Pinecone & LangChain

August 2025

LangChain(python), PineCone, FastAPI, React.

- Efficiently extract structured insights and key points from large documents for fast understanding and interactive queries.
- I built a **RAG (Retrieval-Augmented Generation) system** using LangChain(python) to orchestrate LLM calls and document retrieval. I integrated **Pinecone** as the vector database to store document embeddings, enabling fast and context-aware retrieval. The backend was developed using **FastAPI** to handle file uploads, API requests, and retrieval operations, while the frontend was built with **React** to allow users to upload documents, view summaries, and interact with the system via Q&A.

Second Brain

January 2025

express.js, node.js, jwt webtokens, zod schema, typeScript and mongodb

- Users lacked a centralized platform to store and retrieve content from different sources like **Twitter, YouTube** making it difficult to manage past content efficiently.
- Built a full-stack web application with **React (frontend) and Node.js with Express (backend)**, using **MongoDB** for data storage. Integrated the backend and frontend smoothly using **CORS**, implemented **JWT-based authentication, bcrypt for password hashing, and Zod for validation**, and designed a responsive UI with **Tailwind CSS**.
- Created a secure and user-friendly platform that enables users to store, manage, and retrieve their past content efficiently. The project showcases expertise in **TypeScript, full-stack development, authentication, and database management**.

Chat App

March 2025

Websocket, typescript, react, node.js, express.js

- Traditional HTTP-based communication is inefficient for real-time messaging, leading to delays and poor user experience in chat applications.
- Developed a **real-time chat application** using **WebSockets in Node.js** for persistent, bidirectional communication. Built the frontend with **React (TypeScript) and Tailwind CSS** for a responsive UI.
- Enabled **seamless real-time messaging** with instant updates, improving user engagement and interaction efficiency.

EDUCATION

Shiv Nadar University

2021 – 2025 | Delhi-NCR

B.Tech (Electronics and Communication Engineering)

CERTIFICATES

Ambient Agents with LangGraph(Oct 2025):  Completed LangChain Academy's Ambient Agents with LangGraph course, gaining hands-on experience in building, evaluating, and deploying AI agents using LangGraph.

LangChain for LLM Application Development(Aug 2025):  Complete DeepLearning LangChain course and learnt the use agents, chained calls, and memories to expand your use of LLMs
